Game theory is the study of mathematical models of strategic interaction between rational decision-makers. It has applications in all fields of social science, as well as in logic and computer science. Originally, it addressed zero-sum games, in which one person's gains result in losses for the other participants. Today, game theory applies to a wide range of behavioral relations, and is now an ...

Game theory - Wikipedia

Game theory is the study of the ways in which interacting choices of economic agents produce outcomes with respect to the preferences (or utilities) of those agents, where the outcomes in question might have been intended by none of the agents. The meaning of this statement will not be clear to the non-expert until each of the italicized words and phrases has been explained and featured in some ...

In this version of the game, defection is no longer a dominant move and mutual defection is no longer an equilibrium outcome. If Column cooperates, Row does best by defecting; if Column defects, Row does best by playing (bN); and if Column plays (bN), then Row does equally well by playing any move.
