Description. A hands-on approach to statistical inference that addresses the latest developments in this ever-growing field. This clear and accessible book for beginning graduate students offers a practical and detailed approach to the field of statistical inference, providing complete derivations of results, discussions, and MATLAB programs for computation.

In statistical inference experimental or observational data are modelled as the observed values of random variables, to provide a framework from which inductive conclusions may be drawn about the mechanism giving rise to the data.

In both cases, when the graph has a large spectral gap, accurate and efficient inference is possible via maximum likelihood estimation or its convex relaxation. However, when the spectral gap vanishes, accurate

inference may be statistically impossible, or it is statistically possible but may be computationally intractable.
