trading the measured move pdf
Unlike most trading platforms, it is very easy to measure the number of pips between two points of the price chart on MT4. It is very important to do that when you want to set the stop loss and target orders. For example, you want to know how many pips is from your entry level to the level you want to set the stop loss.

How to Calculate the Number of Pips on MT4 - LuckScout.com
This sudden move by a stock, the sudden change in demand, is often the beginning of a major move. They are swing trading strategies that capitalize on entering after a gap, and guerrilla tactics that capitalize on one or two day moves after a gap.

Trading Stocks Education - How to Trade Gaps
A gap is defined as a price level on a chart where no trading occurred. These can occur in all time frames but, for swing trading, we are mostly concerned with the daily chart. A gap on a daily chart happens when the stock closes at one price but opens the following day at a different price. Why ...

Gaps | How to Identify and Trade Gaps on a Chart
the note at a discount to par in order to move the note . I .e ., rising rates are accompanied by declining prices . Falling rates produce the reverse situation . If rates fall to 1%, our investment yields more than market rates . Now the seller can offer it at a premium to par . Thus, declining rates are accompanied by rising prices .

The targeted move for the reversal is measured from the lowest trough (41.06) to the highest peak. The highest peak is at 52.00. The targeted move is therefore 52.00 - 41.06 = 10.94; The move is projected down from the breakout point at 48.40. The target is calculated by subtracting the move from the value at the point of breakout:
