Shell and Tube Heat Exchanger type exchangers are used in many process industries, as well as nuclear power stations as condensers, steam generators in pressurised water reactor power plants, and feed water heaters. They are also used in many other applications i.e. air conditioning and refrigeration systems.

Shell and Tube Heat Exchanger - step by step calculations

Abstract. The formation of deposits on heat transfer surfaces is an important problem during convective and nucleate boiling heat transfer to water.

Asphaltenes are molecular substances that are found in crude oil, along with resins, aromatic hydrocarbons, and saturates (i.e. saturated hydrocarbons such as alkanes). The word "asphaltene" was coined by Boussingault in 1837 when he noticed that the distillation residue of some bitumens had asphalt-like properties. Asphaltenes in the form of asphalt or bitumen products from oil refineries are ...

The main purposes of a HVAC-system are to help maintain good indoor air quality through adequate ventilation and to provide thermal comfort. Cooling or heat rejection of air-conditioning systems is based on thermodynamic principles and involves heat transfer between fluids.

Uses. One kind of evaporator is a kind of radiator coil used in a closed compressor driven circulation of a liquid coolant. That is called an air-conditioning system (A/C) or refrigeration system to allow a compressed cooling chemical, such as R-22 (Freon) or R-410A, to evaporate/vaporize from liquid to gas within the system while absorbing heat from the enclosed cooled area, for example a ...
