Vertigo is a symptom where a person feels as if they or the objects around them are moving when they are not. Often it feels like a spinning or swaying movement. This may be associated with nausea, vomiting, sweating, or difficulties walking. It is typically worse when the head is moved. Vertigo is the most common type of dizziness.. The most common diseases that result in vertigo are benign ...

A few days after my 3rd son Brennan was born, I suffered from classic benign positional vertigo. Looking back on the course of events, I had a eureka moment last night that literally kept me up in bed. Benign Positional Vertigo (or BPV) is a well-described inner ear condition that otolaryngologists like myself treat all the time.

Background. Benign paroxysmal positional vertigo (BPPV) is caused by a rapid change in head movement. The person feels they or their surroundings are moving or rotating. Common causes are head trauma or ear infection. BPPV can be caused by debris in the semicircular canal of the ear, which continues to move after the head has stopped moving.
